Craig J. Nichols, Agency Secretary

MEMORANDUM

TO: Florida Emergency Medical Communications Plan, Volume 2 Recipients

FROM: Ed Peters, Deputy Director, Division of Telecommunications

DATE: September 19, 2013

SUBJECT: Florida Emergency Medical Communications Plan, Volume 2, 2013 Edition

The Florida Emergency Medical Communications Plan, Volume 2 (Plan) has been revised and is now available online.

This revision includes updates specifically in section 3.2, the “Allocation Tables” by County and section 6 (Wide Area and Statewide Interservice/Mutual-Aid Frequencies). Section 3.2.5 (EMS Air Transport Information), section 4 (Interstate Coordination), and section 5 (Hospital Latitude/Longitude Coordinates) will be updated in a future revision.

Because this Plan can be carried as a *softcopy* on all transport permitted vehicles within the State, more periodic revision may occur to keep section 3 current – particularly where telephone numbers and MED channel assignments are noted “TBD” (to be determined). If you need hardcopies for your transport permitted vehicles, use the hotlink below to print them.

http://www.dms.myflorida.com/suncom/public_safety_bureau/radio_communications/radio_communication_plans

If you have any comments or questions regarding this revision, please call Mr. Carlton Wells at (850) 922-7426 or via email at carlton.wells@dms.myflorida.com.

1 INTRODUCTION

1.1 Purpose

Volume II of the Emergency Medical Services Communications Plan (EMSCP) has been developed by the State of Florida, Department of Management Services (DMS) as an operational “field manual” to be carried as standard equipment (hardcopy or softcopy) on all transport permitted vehicles within the State. It is designed to contain information useful for day-to-day operations, as well as to provide the data necessary to enable radio communications during transport operations in unfamiliar areas, including neighboring counties in Georgia and Alabama.

The Department of Management Services invites suggestions regarding the contents of both Volume I and Volume II of the EMSCP. Please submit recommendations and corrections for the EMS Communications Plan to DMS. Telephone (850) 922-7426 or by mail to:

State of Florida
Department of Management Services
Building 4030, Suite 135N
Tallahassee, Florida 32399-0950

1.2 Summary

Section 2.0 “OPERATIONAL INFORMATION” contains best practice information for correct operation of communications equipment including operating protocol and technical considerations.

Section 3.0 “EMS FREQUENCY ALLOCATIONS” contains an alphabetical listing by county of all radio frequencies for EMS operations within the State, as well as Hospital Emergency Department (ED) addresses and telephone information. Radio dial codes are shown for those counties using selective addressing for radio communications with hospitals. The city and telephone number of each provider is listed. The air ambulance providers are listed separately, showing contact information, frequency allocation, and latitude/ longitude coordinates. Except for MED channel assignments and ED phone numbers, the Hospital ED information is based on the database of Acute Care Facilities recognized by the Florida Department of Health (DOH). EMS Providers listed in this section are also based on the licensure database from DOH.

Section 4.0 “INTERSTATE ALLOCATIONS” gives a general description of the EMS communications systems in adjacent counties of both Georgia and Alabama, as well as the address, telephone, radio frequency, and selective address dial code of each hospital in those counties.

Section 5.0 “HOSPITAL LATITUDE/ LONGITUDE COORDINATES” gives a listing of general latitude/longitude coordinates as provided by the EMS providers.

Section 6.0 “STATEWIDE INTERSERVICE/ MUTUAL AID FREQUENCIES”
This section lists the channel usage, eligibility, primary use, and statewide mutual-aid frequencies available for utilization in Florida.

| Section 7.0 “INDEX OF HOSPITAL AND EMS GROUND - BY COUNTY”

2 OPERATIONAL INFORMATION

2.1 Operating Practices

In the course of providing emergency health care to the public, many of the individual participants practicing in the EMS system are required to communicate with one another via two-way radio communications. Good operator practice is essential to the effectiveness and efficiency of any public safety communications system. For EMS, good operator practice followed by an EMT, paramedic, dispatcher, physician, nurse or other emergency department personnel relates directly to a reduction in response time which in turn saves lives, reduces further injuries and minimizes suffering.

2.1.1 Equipment Familiarization

The first step in proper communications techniques is a familiarization with the radio equipment to be used by the operator. There are many different brands and types of radio equipment items that EMS personnel will encounter in their work and manufacturers are continually introducing new products that will always present new educational challenges. As a minimum, communications systems are comprised of mobile and/or portable radios, base/repeater stations and various radio-controlled devices. Additionally, they may include more complex aspects such as telemetry, satellite receiver voting systems, vehicular repeaters, trunked operations and data.

EMS personnel should be sufficiently trained in the correct operation of all equipment used for communications. Personnel should fully investigate equipment features in order to maximize the extent to which their equipment can assist in delivery of emergency services. Operators are encouraged to ask questions of their communications technicians, manufacturer's representatives or the Department of Management Services to ensure understanding.

2.1.2 Communications Skills

The objective of radio communications in EMS is to convey information in a concise and accurate manner. The communications skills exhibited by operator personnel can have a positive influence on the outcome of a particular event.

A. Operating Protocol

In most EMS services there is generally some agreed-upon protocol (written or unwritten) for the purpose of governing radio communications. If unwritten, such procedures are defined by tradition. No attempt is made here to establish a particular mode of operation; however, certain key points are highlighted for the benefit of operator personnel.

- Follow standard protocol established by the EMS service. It may address the manner in which calls are to be placed from one unit of the service to another, and govern the manner in which messages are formatted.
- Maintain channel discipline. Courtesy and respect for the communications of others sharing the radio channel go a long way in preserving order, especially in congested geographic areas with much radio traffic. **Monitor the channel before transmitting to prevent interference to other users.** Think ahead and keep transmissions short and to the point to maximize airtime.
- Practice verbal communications skills. Speak distinctly, at a moderate rate, and directly into the microphone or handset to maximize intelligibility. Keeping the microphone close to the mouth overcomes background noise and permits the operator to speak in a normal tone of voice. Shouting should be avoided as it can result in audio distortion and therefore prevent intelligible transmission.
- Use plain language to describe a particular condition or event. Individuals under stress may find it easier to relate clear and simple descriptions.

B. Technical Considerations

- Key your transmitter for **at least one second** before engaging in speech. The complexities in communications system design often introduce delay in the time it takes to turn on the various components comprising the system. Transmitters take time to come up to full power output, tone squelch decoding equipment requires time to open receivers and receiver voting systems take time to select the best receiver. While these events generally are accomplished in less than one second, there are many voice transmissions that could be missed in their entirety if the operator did not delay slightly before beginning his/her voice message. Pausing one second after depressing the push-to-talk button on the microphone or headset is sufficient in most cases to prevent missed words or responses.
- Keep loudspeaker clear of clutter. Papers or other materials covering or obstructing loudspeakers can diminish receiver audio and alter intelligibility.
- Avoid turning receiver volume too low. A low setting may fail to attract the operator's attention to an incoming call.

3 EMS FREQUENCY ALLOCATIONS

3.1 General

The following tables of radio channel allocations and organizational data for Emergency Medical Services (EMS) communications within Florida has been incorporated into an automated database to be maintained over time for future revisions.

As with any database of this size, errors and omissions are bound to occur. The Department of Management Services (DMS) requests all organizations to review the data applicable to them, and to advise DMS as to any changes or additions.

3.2 Allocation Tables

The following tables are organized alphabetically by county. Within each county is a listing of UHF radio channel information, followed by information about Emergency Department facilities, and EMS Providers.

3.2.1 Radio Channel Information

Radio channel information is shown by channel use description, by continuous tone-controlled squelch (CTCSS), frequency (in Hertz), and by base-transmit and base-receive frequency (in MHz or MED channel number).

A. MED Channel Frequencies

MED Channel numbers 1 through 103 are regulated by FCC Rules, and correspond to the following mobile/portable radio receive (Rx) and transmit (Tx) frequencies (in MHz):

Mobile/ Portable Radio Programming¹

MED Channel	Rx Frequency	Tx Frequency	Description		MED Channel	Rx Frequency	Tx Frequency	Description
1	463.000	468.000	LMC/CMC		6	463.125	468.125	LMC/CMC
12	463.0125	468.0125	LMC/CMC		62	463.1375	468.1375	LMC/CMC
2	463.025	468.025	LMC/CMC		7	463.150	468.150	LMC/CMC
22	463.0375	468.0375	LMC/CMC		72	463.1625	468.1625	LMC/CMC
3	463.050	468.050	LMC/CMC		MED 8	463.175	468.175	Mutual-Aid ^(2,3)
32	463.0625	468.0625	LMC/CMC		MED 82	463.1875	468.1875	ESF8 Support ⁽²⁾
4	463.075	468.075	LMC/CMC		9	462.950	467.950	Dispatch
42	463.0875	468.0875	LMC/CMC		92	462.9625	467.9625	Dispatch
5	463.100	468.100	LMC/CMC		10	462.975	467.975	Dispatch
52	463.1125	468.1125	LMC/CMC		102	462.9875	467.9875	Dispatch

Base Station/ Repeater Programming

MED Channel	Tx Frequency	Rx Frequency	Description		MED Channel	Tx Frequency	Rx Frequency	Description
1	463.000	468.000	LMC/CMC		6	463.125	468.125	LMC/CMC
12	463.0125	468.0125	LMC/CMC		62	463.1375	468.1375	LMC/CMC
2	463.025	468.025	LMC/CMC		7	463.150	468.150	LMC/CMC
22	463.0375	468.0375	LMC/CMC		72	463.1625	468.1625	LMC/CMC
3	463.050	468.050	LMC/CMC		MED 8	463.175	468.175	Mutual-Aid ²
32	463.0625	468.0625	LMC/CMC		MED 82	463.1875	468.1875	ESF8 Support ⁽²⁾
4	463.075	468.075	LMC/CMC		9	462.950	467.950	Dispatch
42	463.0875	468.0875	LMC/CMC		92	462.9625	467.9625	Dispatch
5	463.100	468.100	LMC/CMC		10	462.975	467.975	Dispatch
52	463.1125	468.1125	LMC/CMC		102	462.9875	467.9875	Dispatch

B. CTCSS Frequencies

Continuous Tone-Controlled Squelch Systems (CTCSS) provide a reduction of nuisance interference in FM radio systems by incorporating a sub-audible tone onto the carrier

¹ Talk-around use of mobile/ portable radios require simplex programming of the lower side (463.____ MHz) of the UHF pair for each channel.

² The MED 8 and MED 82 channels are exclusively reserved for MED 8 and MED 82 radio systems statewide with its respective CTCSS frequencies.

frequency such that only a similarly keyed radio receiver will open its squelch circuit to receive the transmission. Although CTCSS by itself cannot prevent undesired "FM capture" from occurring due to nearby simultaneous co-channel transmissions, systems equipped with CTCSS will eliminate most interference from distant sources.

CTCSS frequencies are designated by the Telecommunications/Electronic Industries Association (TIA/EIA) in TIA/EIA Standard 603. The following table is a portion of those CTCSS frequencies above 90 Hz and below 211 Hz, which are approved for EMS radio communications in Florida. Two abbreviated code schemes for these frequencies in the following table – the Motorola codes and the Wolfsberg (WOLF) codes. Insofar as possible, CTCSS tones within a local geographic area should be exclusively from either Group A or Group B to avoid false sensing due to adjacent tone frequencies.

GROUP A

CTCSS FREQ (Hz)	MOTOROLA CODE	WOLFSBERG CODE
100.0	1Z	14
107.2	1B	16
114.8	2A	18
123.0	3Z	22
131.8	3B	24
141.3	4A	26
151.4	5Z	28
162.2	5B	32
173.8	6A	34
186.2	7Z	36
203.5	M1	38

GROUP B

CTCSS FREQ (Hz)	MOTOROLA CODE	WOLFSBERG CODE
94.8	ZA	12
103.5	1A	15
110.9	2Z	17
127.3	3A	23
136.5	4Z	25
146.2	4B	27
156.7	5A	31
167.9	6Z	33
192.8	7A	37
210.7	M2	--

Excluded from the above list are CTCSS frequencies below 90 Hz which may cause unacceptably long receiver response times in some systems, frequencies above 211 Hz which may require special engineering considerations in production, frequencies which would receive interference from common 60 Hz AC power systems, and non-TIA/EIA frequencies offered by some manufacturers which would limit interoperability.

3.2.2 Emergency Department Information

For each County, Emergency Department facilities are listed by geographic (rather than postal) address, followed by the 24-hour telephone number of either the switchboard (Main), emergency department (E.D.), or both. EMS channel usage shown for Emergency Departments is current as of May 2013. Specific Emergency Department MED channel allotments have been assigned by the Department of Management Services to each Emergency Department facility and are shown beside each facility under the column titled "Med Channel Assignment." Information pending is shown as "TBD" (to be determined).

3.2.3 EMS Provider Information

Within each County, EMS providers are listed alphabetically showing the telephone number of each provider. Telephone numbers are current as of May 2013.

3.2.4 Statewide DTMF Addresses

Each county has been assigned a primary DTMF address for use in the MED 8 Statewide Medical Coordination (SMC) system. The DTMF address is listed with the name of each county. This list was derived from an alphabetical list of Florida counties.

3.2.5 EMS Air Transport Information

EMS Air transports are listed alphabetically by county showing the address and emergency phone and fax numbers for each agency. Radio channel information is also provided for each air agency.

Communications for aeromedical services may utilize certain radio frequencies within the Aviation Services of FCC Rules Part 87, "Aeronautical Enroute and Aeronautical Fixed Stations." The scope for Aeronautical Enroute stations is limited to the necessities of safety and primary operation of the aircraft. Sub-part I does not allow for medical communications. These channels are associated with Air-traffic Control Centers, Airport Control Towers and "Unicom" communications systems. By design these radio systems are limited in the communications coverage capabilities they would provide for low flying rotorwing aircraft. Given the limitations, by rule and/or design associated with these radio channels their use by prehospital for flight following is not acceptable.

Frequencies within the applicable FCC Rules may be utilized for Air Ambulance Dispatch and Response and/or Medical Coordination on a secondary basis to land-based systems. Licensing for implementation or expansion of air ambulance communications on any frequencies within the Public Safety requires prior approval by the Department of Management Services (DMS). The EMSCP has established specific radio frequency allotments for both "Air Primary" and "Air Secondary" channels within Florida for aeromedical dispatch and/or flight following communications.

All licensed rotorwing aircraft and dispatch centers within the state of Florida shall have the ability to communicate on the Air Secondary frequency 155.340 MHz with a CTCSS, PL tone, of 167.9 Hz. This provides continued flight following with the aircraft while medical crews utilize their UHF, MED Channel radio to provide medical reports (LMC or SMC). Secondly this system provides a "Statewide" radio for coordinating a mass casualty incident with aircraft that would necessitate communications with the various aircraft, dispatch centers and/or landing zone management. Further, this frequency shall provide EMS helicopter personnel with continued safety of flight situations in which a vehicle is out of its prime area and unable to access its dispatch center. Such use of the Air Secondary channel shall be limited only to the temporary duration of such situations unless otherwise approved in writing by DMS.

4 INTERSTATE COORDINATION

4.1 General

Medical emergencies near the border of northern Florida often involve the mutual response of emergency medical service providers and hospital emergency departments in Alabama and/or Georgia. Interstate communications between providers and hospitals of all three states are necessary to support such EMS operations and mutual-aid agreements, as well as for wide-area mobilization of emergency response units during mass casualty incidents and disaster situations. This section (current as June, 2000) describes the VHF High Band portion of the EMS communications systems, radio frequencies and selective call addresses of hospitals and providers in the southernmost parts of Alabama and Georgia, which are readily accessible to providers and hospital emergency departments in the North Florida area.

4.2 Alabama

Each hospital has a specific radio dial code assigned to it. To access a hospital, select the appropriate channel and then dial the radio dial code of the desired hospital with an interrupted tone rotary dial encoder (HEAR/EACOM).

5 HOSPITAL LATITUDE/ LONGITUDE COORDINATES

The following aeronautical information (Latitude/ Longitude) is specifically designed to provide information for computer based navigation systems aboard aircraft. This data (current as July 1998) is not intended to be utilized for approach, landing, or departure operations. Coordinates were generated by LORAN-C, GPS, or VOR/DME calculations furnished by numerous Florida aero medical providers. The Department of Management Services makes no warranty, expressed or implied, as to the precision of this information and explicitly disclaims liability to the accuracy thereof. We suggest that you check Airman's Information Manual, Airport/Facility Directory, NOTAMS, and/or Safety Bulletins for supplemental data and current information. Please notify the Office at (850) 922-7426 of corrections and additions to make this information more accurate
